

CUSTOMER TOOLKIT

We know your time is valuable, and you shouldn't have to recreate spreadsheets and tools that we've already developed.

We're providing the tools below for your convenience, because we make wind hassle-free.

Explore some of the resources our team uses to plan a project.

The tools below are some of the same mechanisms we use to determine if a *Wind for Industry* project will work. We consider things like financials, site conditions, regulatory requirements, and a host of other factors when conducting due diligence for a project.

REA Calculator

A straightforward excel spreadsheet that helps you calculate the long-term and present value of an on-site generation project.

Our Renewable Energy Agreement Highlighted

While we think that all of our REA is important, we know where the big commercial sections are that matter most to our customers. We have highlighted our standard REA to help you jump right to the most important commercial sections.

TIBE Library

One of the most confusing parts about tax equity is figuring out where to get all the relevant information. We have pulled all the IRS, Treasury, and court documents and put them in one place to make it easier for your team to take a deep dive into TIBE.

Historical Electricity Rates

We've compiled publicly available rate data from the U.S. Energy Information Administration (EIA) to analyze energy costs for the last 20 years. View summaries and the raw data for yourself, to see how a fixed energy rate could benefit your company's finances.

**Corporate Value #3:
Make Our Customers
Smarter Than the
Competition's Experts.**

**Corporate Value #5:
Make Wind Hassle-Free**
