

INVESTORS

One Energy is always seeking capital providers who believe in our market thesis, our team, and our mission. The right capital provider will partner with us on our mission to deliver the decarbonized, distributed power grid of the future, essentially building Utility 2.0.

One Energy is an Industrial Power Company and the largest installer of on-site, utility-scale wind energy in the United States. We provide turnkey, physically connected solutions for on-site, behind-the-meter power generation and distribution – and we directly provide these solutions to large industrial energy users.

In the United States, 53,000 large industrial facilities (just 0.6% of all electricity users) consume roughly 25% of all electric energy. Industrial decarbonization represents the fastest path to lasting impact in combatting climate change, and we are substantially decarbonizing industrial energy users and actively transforming the way the power grid works.

One Energy's vertically integrated model makes us one of the few companies positioned to succeed in this space, empowers our team to transform the 100-year-old utility industry, and enables us to build the next iteration of the power grid.

To date, One Energy has installed and operates 40.5 megawatts of Wind for Industry projects, making us the largest installer of on-site wind energy in the \$58+ billion U.S. serviceable market. To date, our operating fleet has eliminated the need to burn 295 million pounds of coal in a traditional power plant, and over the next 20 years, our operating projects will eliminate 1.5 million metric tons of CO2-equivalent.

If you are interested in joining One Energy on our mission, please contact us. We are looking for partners to provide capital as we build Utility 2.0 and the customer-centric power grid of the future.
